TEST GRAPH

But I couldn't do both, it seem to override the other (see the code for better understanding). ** For example if you only use static labels for horizontal labels, * graphview will use the dynamicLabelFormatter for the vertical labels. * public StaticLabelsFormatter(GraphView graphView, String[] horizontalLabels, String[] verticalLabels, LabelFormatter dynamicLabelFormatter) { mGraphView = graphView; initHorizontalLabels(verticalLabels, dynamicLabelFormatter); } *** * @param horizontalLabels the horizontal labels, ordered form the left to the right * if it is null, the labels will be generated via the #dynamicLabelFormatter * @param verticalLabels * @param dynamicLabelFormatter * the label formatter that will format the labels * for that there are no static labels defined. * o mV import com.joed4.graphview.Viewport; *** * Use this label formatter to set static labels for the vertical labels. If you want to use the dynamicLabelFormatter for the vertical labels, you can either use the #dynamicLabelFormatter or the DefaultLabelFormatter but not both at the same time. See the image below. When there are integers in y-labels (and I have given large padding to cope with numbers like: -0.0231, -0.0450, etc). When there are floating points in y-labels (and I have given small padding to make it look nice for numbers like: 10, 25, 40, etc). And I'm unable to find the sweet spot. * @param mVerticalLabels * the vertical labels, ordered from bottom to the top * if it is null, the labels will be generated via the #dynamicLabelFormatter * protected String[] mVerticalLabels; *** * the label formatter that will format the labels * for that there are no static labels defined. * * public void setDynamicLabelFormatter(LabelFormatter dynamicLabelFormatter) { this.mDynamicLabelFormatter = dynamicLabelFormatter; } *** * @param horizontalLabels the horizontal labels, ordered from left to the right * if it is null, the labels will be generated via the #dynamicLabelFormatter * protected String[] mHorizontalLabels; *** * the label formatter that will format the labels * for that there are no static labels defined. * * public void setVerticalLabels(String[] verticalLabels) { this.mVerticalLabels = verticalLabels; } *** * @param verticalLabels the vertical labels, ordered from bottom to the top * if it is null, the labels will be generated via the #dynamicLabelFormatter * public void setVerticalLabels(String[] verticalLabels) { this.mVerticalLabels = verticalLabels; } *** * @param mVerticalLabels * the vertical labels, ordered from bottom to the top * if it is null, the labels will be generated via the #dynamicLabelFormatter * protected void adjust() { mDynamicLabelFormatter.setViewPort(mViewport); if (mViewport.getMinY(false) > mViewport.getMaxY(false)) double range = maxY - minY; value = value - minY; int idx = (int)(value / range) * (mVerticalLabels.length - 1); return mVerticalLabels[idx]; } else { return mDynamicLabelFormatter.formLabelValue(value); } } *** * @param viewport * @Override public void setViewport(Viewport viewport) { mViewport = viewport; adjust(); } *** * adjusts the number of vertical/horizontal labels * protected void adjust() { mDynamicLabelFormatter.setViewPort(mViewport); if (mVerticalLabels != null) { if (mVerticalLabels.length < 2) { throw new IllegalStateException("You need at least 2 horizontal labels if you use static label formatter."); } mGraphView.getGridLabelRenderer().setNVerticalLabels(mVerticalLabels.length); } if (mHorizontalLabels != null) { if (mHorizontalLabels.length < 2) { throw new IllegalStateException("You need at least 2 vertical labels if you use static label formatter."); } mGraphView.getGridLabelRenderer().setNHorizontalLabels(mHorizontalLabels.length); } } *** * Java Source Code Link: https://github.com/joed4/graphview/blob/master/src/main/java/com/joed4/graphview/StaticLabelsFormatter.java *** * License: Apache License Version 2.0, January 2004 *** * Copyright 2004 The Apache Software Foundation *** * Licensed under the Apache License, Version 2.0 (the "License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at *** * http://www.apache.org/licenses/LICENSE-2.0 *** * Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. See the License for the specific language governing permissions and limitations under the License. *** * That resolve my problem. * * protected void init(String[] horizontalLabels, String[] verticalLabels, LabelFormatter dynamicLabelFormatter) { mDynamicLabelFormatter = new DefaultLabelFormatter(); if (mDynamicLabelFormatter == null) { mDynamicLabelFormatter = new DynamicLabelFormatter(); } mHorizontalLabels = horizontalLabels; mVerticalLabels = verticalLabels; } *** * Set a label formatter that will be used for the labels * that don't have static labels. Here is the code: NumberFormat nf = NumberFormat.getInstance(); simpleDateFormat, nf, #GetLabelFormatter(LabelFormatter) in GridLabelRenderer cannot be applied to (Date&XAxisLabelFormatter, java.text.NumberFormat) How do I use both of the LabelFormatter separately for both axes? * * protected LabelFormatter in DynamicLabelFormatter; *** * reference to the graphview * * protected final GraphView mGraphView; *** * creates the formatter without any static labels * define your static labels via (@link #setHorizontalLabels(String[])) and (@link #setVerticalLabels(String[])) * * @param graphView reference to the graphview * * @param dynamicLabelFormatter the label formatter that will format the labels * for that there are no static labels defined. That resolve my problem. * * protected void init(String[] horizontalLabels, String[] verticalLabels, LabelFormatter dynamicLabelFormatter) { mDynamicLabelFormatter = new DefaultLabelFormatter(); if (mDynamicLabelFormatter == null) { mDynamicLabelFormatter = new DynamicLabelFormatter(); } mHorizontalLabels = horizontalLabels; mVerticalLabels = verticalLabels; } *** * Set a label formatter that will be used for the labels * that don't have static labels. Here is the code: NumberFormat nf = NumberFormat.getInstance(); simpleDateFormat, nf, #GetLabelFormatter(LabelFormatter) in GridLabelRenderer cannot be applied to (Date&XAxisLabelFormatter, java.text.NumberFormat) How do I use both of the LabelFormatter separately for both axes? * * protected LabelFormatter in DynamicLabelFormatter; *** * reference to the graphview * * protected final GraphView mGraphView; *** * creates the formatter without any static labels * define your static labels via (@link #setHorizontalLabels(String[])) and (@link #setVerticalLabels(String[])) * * @param graphView reference to the graphview * * @param horizontalLabels the horizontal labels, ordered from left to the right * if it is null, the labels will be generated via the #dynamicLabelFormatter * @param verticalLabels the vertical labels, ordered from bottom to the top * if it is null, the labels will be generated via the #dynamicLabelFormatter * *** * @param horizontalLabels, verticalLabels, null) *** * creates the formatter with static labels defined. I'm using Android GraphView. If I could use a separate for both of the axes then I would set setMaximumFractionDigits(2), and provide a static padding. *** * You can set the static labels for vertical or horizontal * individually and yes you can define a label formatter that is to be used if you don't define static labels. * * @param dynamicLabelFormatter the label formatter that will format the labels * for that there are no static labels defined.
